

## On the Fly.....

### Only the Best

by Jerry Ragle, CDT

When I see that Ragle Lab can improve our services to you, our customers, whether that be through a procedure or product I am going to offer that as a standard method of operation. We can always do something else if requested but I am a believer that something has to be at the top, or core, for all else to be measured from. Over the years I have watched implant abutments improve. First it was a simple post but they came out or broke. Then whether the hex is inside or out, tines or friction, separate screw, double thread or single. They all worked for their time. Now we enter into the age of esthetic abutments. Some make universal esthetic abutments but then there are custom. [See why](#) I recommend only one standard procedure for today's implant abutments.

### "Good Things Come to Those Who Wait"

As a production laboratory we work on tight time schedules, incent our employees to produce quality work quickly and for the most part this is exactly what our customers desire. However, in the past two years we have seen a large influx in the requests for custom work. At first we tried to produce this high quality, time consuming product on the same time schedule as everything else but, we have since found time is the enemy. We love doing your custom work but, simply put, we need more time. View the new ["Custom" time and fee schedule](#).

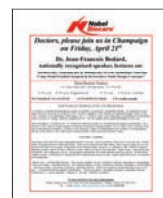

### Local Seminars

Atlantis Abutment and Implant Case Review. March 30th. [More Details](#)

Impressions, Implant and Denture Techniques. April 6th. [More Details](#)

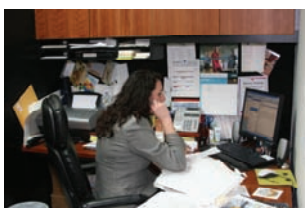

Nobel Biocare presents Dr. Jean-Francois Bedard On April 21st. [More Details](#)

### Training

Using the PTC Verification 2000 training system Ragle can teach **Dental Assistants** Simplified Posterior Anatomy. This course is a 40 hour course that can be scheduled around the needs of the assistant. The course covers all the surfaces and features of the posterior teeth. Upon completion the student will receive a certificate from PTC stating certification. For more details contact Kathleen Craven at 217-398-0090.

### Kathleen's Corner

During the RCAD seminar in February we were asked about cementation options for the Cerec product. I asked around and did some research during Mid-Winter meeting in Chicago to find that [Ivoclar's Variolink Veneer](#) and [3M's Relyx Veneer](#) were the two most highly recommended products. These recommendations came from Doctors and suppliers.

### Issue 2 - April 06

**Important Implant Information**

Ragle Dental Laboratory now offers Atlantis Custom CAD Abutments as our preferred standard abutment. The precision fit, uniform esthetics, and overall design makes this abutment the best choice for all Spine, Screwvent and Nobel Bio-Care abutments.

Abutment Scheduling Choices. Please select one.
