

# CAPTEK™

# 20% Off

We have an **AMAZING** deal for you! Captek™ is a patented "reinforced gold" technology for crowns and bridges, offering the esthetics of metal-free restorations and the strength of low or no gold PFMs. Clinically proven plaque resistant; Captek™ is arguably the best all-around restorations.

**Should Captek™ be considered for patients with periodontal issues?**

It is a healthy solution for all patients that need to keep their soft tissues healthy over time.

**Is Captek™ as esthetic as an all-ceramic restoration?**

In many cases, yes. Ideal for esthetic implant cases, warm gold color mimics live dentin, great for bleach shades, masks out dark preps/tooth structure.

**What is the maximum pontic span for Captek™ bridges?**

Now, with Captek Bridge and Implant™ material, there are no span limitations. Standard metal ceramic fabrication parameters apply.

For the month of May we are discounting our Captek™ restorations at 20% off. The price for one unit will be \$184 for a limited time. Don't miss out; and take advantage of this deal today!

**Contact us with any questions you have regarding your Captek™ restorations!**
